X-M Radio allows us to get radio service in this rural area of Texas. We do a lot of traveling around south, central and west Texas. The weather information and traffic information is helpful as we can get it before we get to our destination. I think this a ridiculous move to restrict information. It falls in the same category of not being able to get network TV because of our proximity to an affiliate. We cannot get the local networks on the satellite because they are too small to be on the satellite.

I respectfully request that you leave the XM signal alone....
